

ABSTRACT OF THE INVENTION

A desktop bible carrying case 10 is provided with an enclosure 12 having a cavity 24 formed therein. A rectangular shaped support ridge 26 is coupled in the cavity 24 to inside
5 portions of the enclosure 12. A flexible lid 28 is provided which is pivotably coupled to a back portion of the enclosure 12. Additionally, a planar shaped desktop member 50 is pivotably coupled to the enclosure adjacent to and between the lid 28 and the support ridge 26. An elevating member 52 is pivotably
10 coupled to an outermost end of the desktop member 50. As a result a desktop bible carrying case 10 is provided to carry a bible 60 and a pad 62 in the open area 24 until they are removed therefrom and positioned on the desktop member 50 for use.
